Lappset gets people of all ages moving

The health effects of physical activity on people's well-being are undeniable. Study after study has proved the importance of exercise and physical activity as part of people's overall wellness. Regular exercise reduces stress, helps the body function normally, supports recovery from illnesses, has a positive impact on the way we feel and, first and foremost, strengthens our physical fitness.

There is a huge range of different sports and forms of exercise. New training methods based on the use of bodyweight develop all the time, such as street workout. The Lappset sport and fitness range of equipment provides safe and durable training opportunities with modern designs for people of all ages, from people taking care of their physical fitness to athletes.

Our product development is based on our own experience of more than 45 years, and also co-operation with professionals within various sports. All our concepts, from parkour to street workout, have been designed in collaboration with people specialising in the particular sport.

Modern Scandinavian design with colourful details renders our sports equipment range suitable for various environments, from parks to fitness centres, school yards and indoor facilities. You can encourage your staff's involvement in physical activity by selecting an ensemble from our product range to support their lunch break workouts in the office lobby, for example! Studies indicate

that physical activity during school breaks promotes concentration and learning. Our sports products are, therefore, ideally suited to schoolyards to activate pupils to develop a physically active way of life.

If you are planning a local fitness and play area, combining a playground for children and fitness and play areas for young people, adults and the elderly, the Lappset Sport product range will provide you with everything you need.

Our Sport catalogue will give you some ideas of how fitness and sport areas can be planned. Our products comply with the new safety standard EN 16330 for fitness equipment, so you can rest assured that when you buy an ensemble from us, it is safe, durable and among the best in the market in terms of usability. Our MyDesign! service will help you with your local planning, and our customer service will always be ready to assist you in finding an overall solution that best meets your needs and budget.

You can find the product information with all necessary details on our website. Don't forget to keep up with us also on social media. @LappsetGroup ja #lappset

Making it easy for everyone to keep moving

In a good outdoor fitness and play area, the needs of people of all ages and fitness levels come together. In an ideal situation, three generations would exercise at the same time. Therefore, our mission is to get everyone moving.

Everyone has their own individual reasons to exercise. For this reason, fitness areas should be approachable, and the equipment provided should be easy to use. In the ideal case, the playground and fitness area appeals to three generations at the same time. Children and young people will then not stare at their different electronic devices, but will see how their parents exercise. That is observational learning in the best possible form!

It also supports the prevention of diseases threatening our national health, and provides excellent opportunities for preventing social exclusion. The social dimension is also of great importance, since cities and municipalities do well when individuals living in them are doing well.

Functional collections are created by combining various elements.

Lappset offers different areas that can be combined to activate as large a number of people as possible at the same time. You can plan a versatile collection by combining different elements from, for example, the Gym, Fitness and Senior Sport areas. Such a place would serve the needs of top athletes, people taking care of their fitness as well as people in need of a little help.

We are continuously exploring what kind of sports and forms of exercise are popular in Finland and elsewhere in the world. At the moment, these trends are global, and functional fitness training, such as crossfit, is well presented in our product range. One trend is still to emerge fully both in Europe and elsewhere in western countries. The age profile of the population is becoming older, so one would imagine that investments in public facilities would increasingly be targeted to senior citizens. We offer an excellent solution for this: the versatile Senior Sport range of equipment.

”

“Outdoor parks give an enormous amount of extra energy to your life! Exercising in fresh outdoor air gives a good counterbalance to dark and stuffy gym rooms.”

Susan Saarinen, Fitness athlete

LIFE™

Lappset LIFE

Fitness for everyone

We believe that everyone is entitled to physical fitness. For this reason, Sport parks are made as approachable as possible, and people will find them enjoyable, regardless of their age or fitness level.

Lappset Sport fitness equipment is designed to cover the exercise needs of people of all ages. The product selection includes advanced exercise solutions for children, adolescents, adults and senior citizens alike. The attractively designed environment allows everyone to exercise according to their own fitness level, whether alone or with others. Children who get into exercise at a young age are likely to maintain a physically active way of life all their lives.

At best, Sport parks turn exercise into an experience that brings different generations together and makes us healthier as a nation.

LIFE symbols for guidance

We have created a Lappset Intensity Factor Estimation (LIFE) chart. Its heart symbols will tell fitness equipment users at a single glance whether it is suited for them. The hearts symbolise the heart rate; Lappset Sport products have been divided into the categories High, Mid and Low according to heart rate. Equipment and areas in the High category are designed to give the users physical challenges at a high heart rate. You can seek such challenges on ball game arenas or when using Fitness equipment. In the Mid symbol range, such as the Gym and Classic Sport areas, the heart rate will stay in the mid-level, which develops physical fitness. The white Low icon, on the other hand, marks the senior products, designed for developing the motor skills and balance of the elderly in a gentle manner.

New standard

Inspected for safe usage

The EU-wide safety standard for outdoor fitness areas entered into force in 2015. Lappset has updated all its products covered by the standard to meet the new requirements.

The trend is clear throughout Europe: the demand for outdoor fitness areas in public places is increasing. In other words, people want to exercise outdoors, and therefore the authorities wish to ensure that this can be done safely. Therefore, a new EU-wide safety standard entered into force in 2015. We have naturally updated the products which are covered by the standard to meet the new requirements. Among Lappset products, the new standard (EN 16630) applies to Gym, Fitness and Senior Sport equipment. Another EU-wide standard will be issued for Parkour products.

All pieces of equipment are carefully inspected

We have an extensive range of products, some of which are not covered by the standard. The standard does not apply to free weight equipment, but we have ensured their safety as well. The independent inspection agency TÜV has given a statement on Lappset's free weight products according to which they are safe to use. Still, in the planning of fitness areas, it is good to take into account that free weight products should not be placed in the immediate vicinity of playgrounds or day care centres, for example.

Lappset Fitness products enable active fitness enthusiasts to engage in challenging exercise at the High level of the Lappset Intensity Factor Estimation scale.

FITNESS

Using your own bodyweight for building up strength and stamina

Fitness enthusiasts and athletes have noticed that you can train quite intensively using your own bodyweight. Bodyweight training is a great fitness sport also in the sense that you can begin your exercise whenever there is proper equipment available.

In Lappset Fitness areas, you can focus on specific muscle fitness sets or effectively increase your heart rate on course-like practise areas. Bodyweight training enhances your stamina, mobility and strength. At the same time, it improves your balance and improves your speed and agility. Well-designed Fitness areas offer challenges to both beginners and more advanced users, because the equipment allows versatile variations of the

exercise routines. By choosing a suitable number of repetitions and the correct tempo, bodyweight training can be a good complementary exercise for running, or an exercise routine of its own. When training with Lappset Fitness products, you can make the exercise perfectly suited for you by adjusting the number of repetitions and the tempo, whether you are an occasional user, active user or an athlete.

Efficient and energetic design

The design of Lappset Fitness equipment reflects the energetic images associated with the sport. The forms and colour options are in keeping with what you are used to seeing in gyms and various blogs and images widely admired in the social media. Lappset Fitness equipment combine wood and metal materials. There are four colour scheme palettes available for creating an area.

LIFE™ ♥ HIGH

Street Workout products enable active fitness enthusiasts to engage in challenging exercise at the High level of the Lappset Intensity Factor Estimation scale.

STREET WORKOUT

Impressive strength and muscle mass

The human flag is a static hold, where you hold your body parallel to the ground supported by a vertical bar. The hold requires hard training and a lot of strength, but when you achieve it, it gives you an enormous amount of pleasure. In this sport you can set your goals high, but street workout is easy to take up even by beginners.

When you look closely, you may see the whole world as a giant gym. This is the idea behind street workout, which Lappset is introducing in its sport areas. In street workout, the exercise is based on own bodyweight and team spirit. The community spirit within the training team is one of the finest aspects of the sport. Another fine aspect is that practically anyone can use the equipment.

It is easy even for an ordinary jogger to stop by a street workout park to do a few stretches or chin-ups just in passing. Street workout increases your strength efficiently. The exercises

are based, for example, on push-ups, chin-ups, crunches and back extensions. Once you are familiar with the basic exercises, you can expand the workout endlessly from there. In a street workout park, you can proceed all the way, for example, to extremely efficient static holds, such as the handstand or the human flag.

An exercise area that attracts people

People do street workout for various reasons: for one person, increasing strength may be important, whereas another may be motivated by impressive body control. A handstand push-up is an excellent example of an exercise that combines both motivators: it attracts attention, and requires body control and strength. The Lappset Street Workout frames have been developed in collaboration with the Finnish Street Workout association. They are based on the Lappset Fitness range of equipment. The exercises are largely based on the use of different bars and frames, enabling such routines as chin-ups and dips. The Street Workout parks come in three different sizes and four colour schemes.

LIFE™ ♥ MID

Classic Sport products are built for exercise at the Mid level of the Lappset Intensity Factor Estimation scale, which is suitable for everyone regardless of fitness level.

CLASSIC SPORT

Back to basics

Not everyone is looking for complicated series of movements or the latest fitness trends. For them, the classic exercise routines offer everything they need for meaningful physical training.

Basic fitness begins with the basic exercise routines. In Finland, you will see many people on running paths and in sports areas who consider it important to stick to the basic exercise routines in their physical training. They do not necessarily need any complicated series of movements or equipment, but trust the classic forms of exercise. All in all, they have understood the meaning of physical activity for a good life and it is good to nourish this inspiration.

Naturally, the Lappset Classic Sport equipment does offer challenges for a fitness enthusiast as well since, by increasing the tempo and number of repetitions in circuit training, anyone can add challenge to a training session.

The status of a classic is earned over years of use

The Lappset Classic Sport equipment provide an opportunity to make traditional fitness exercises. Bodyweight is used, for example, in push-ups, dips and chin-ups. The Classic Sport range of equipment has proven its functionality and durability over years of use. Its design is timeless, ecological and simple: it is made from pressure-treated wood and grey metal parts.

LIFE™  MID

Lappset Gym products are built for exercise at the Mid level of the Lappset Intensity Factor Estimation scale, which is suitable for everyone, regardless of fitness level.

GYM

Gym training with
a good supply of oxygen

With correct choice of materials and good planning, a well-equipped gym can be taken outdoors. This makes gym equipment available for everyone.

I only wish the air at the gym was fresh! This is a wish shared by many fitness enthusiasts – and one that can easily be fulfilled! In Lappset Gym parks, indoor gym equipment has been moved outdoors, with the fitness enthusiasts themselves functioning as the engine and weights. The idea of Lappset outdoor gyms is to make gym equipment available for everyone and thus easy to use. The design of each piece of equipment is so clear that it automatically steers people to do the exercise correctly. This makes training safe.

Higher spirits for you or your team

In addition, an outdoor gym offers excellent complementary exercise along a running path or next to a ball game field that blends in with its surroundings. You can easily stop by one to do a few exercises. We know that physical training outdoors with a group makes one feel better, but it also raises the team spirit. Therefore, Lappset Gym outdoor parks offer an excellent platform for enhancing well-being at work, for example. Lappset Gym equipment is made from metal and there are three choices of colour: lime, grey and white.

LIFE™ ♥ LOW

Lappset Senior products provide gentle, low-intensity exercise at the Low level of the Lappset Intensity Factor Estimation.

081415M HIP SPRING

SENIOR SPORT

More movement for improved life management

Lappset Senior Sport equipment strengthen the motor skills and manual dexterity of the elderly. They offer sensible forms of activity, which also enhances mental well-being.

It is in the interests of all of us that senior citizens have easy access to exercise equipment, and, above all, it is in their own best interests. Training muscle tone, balance and motor skills are good for the elderly, both mentally and physically. Geriatric research has shown that the fear of falling increases the actual risk of doing so. Thus, increasing confidence through physical training can create a positive spiral. Exercise also guarantees senior

citizens a more independent control over their lives. When you have no problems buttoning up your shirt or doing your everyday shopping, you know you have better control over your own life.

Our mission: movement for everyone

The Senior Sport areas fulfil our mission to have people of all ages moving. The idea behind Senior Sport is also to offer different generations a natural way of spending time together. Therefore, this range of equipment has been designed on the basis of research data collected on the everyday lives of the elderly and children in day care. In other words, the Senior Sport area is the perfect place for children and grandparents to play together.

LIFE™ ♥ HIGH

Parkour products enable active fitness enthusiasts to engage in challenging exercise at the High level of the Lappset Intensity Factor Estimation scale.

- » The Lappset parkour equipment fulfils the requirements of the EN 1176 safety standard
- » Products more than 600 mm in height need a safety surface around them

PARKOUR SOLUTIONS

Aiming at uninterrupted movement

Both novices and experienced practitioners can share the parkour areas in perfect harmony.

One of the goals of parkour is to achieve smooth, uninterrupted movement. For this reason, it is advisable to plan parkour areas in such a way that it is easy for the practitioners to find interesting routes. Our mission, on the other hand, is to distract adolescents from their electronic devices and do some physical activity outdoors. One does not need to abandon the gaming world altogether, since the same movements familiar from computer games are repeated in parkour.

The MyDesign service will help you design your area in just the right way

Lappset parkour equipment and ready-made areas have been designed in collaboration with the Finnish Parkour Academy. This collaboration guarantees that the final result really works. If a ready-made area does not feel like the right solution, you can always turn to Lappset's MyDesign service. It will consult the real traceurs to ensure that the area really meets your needs. The parkour area is suited also for those doing street workout, since the same equipment can be used for their training as well.

LIFE™ ♥ HIGH

Lappset Pumptracks enable active fitness enthusiasts to engage in challenging exercise at the High level of the Lappset Intensity Factor Estimation scale.

LAPPSET PUMPTRACK

Suitable for every riding style

The pumptrack welcomes younger and older riders alike on bicycles, scooters, skateboards, rollerskates or wheelchairs, for example.

When riding pumptrack, or pumping, the key thing is to control your speed and trails. Pumping up and down the bumps of the track allows you to gain or reduce speed and ensure that you hit the curves at optimal speed. As your confidence and speed

increase, you can ride using different styles and even jump over some bumps. Smaller users have been taken into account in the design of Lappset's pumptracks – the lower parts of the track can be ridden at a lower speed.

Lappset's pumptrack is built using modules with a durable wooden structure. The surface of the track can be ridden in almost any weather. We offer three pre-designed pumptracks but can also combine modules to offer tracks tailored to your specific needs.

LIFE™  HIGH

Lappset arena products enable active fitness enthusiasts to engage in challenging exercise at the High level of the Lappset Intensity Factor Estimation scale.

BALL GAMES AND ARENAS

At the core of communal physical activity

Ball games offer opportunities for social physical activity at its best. Our range of ball game arenas offers play fields for both street-credible panna and traditional playful yard tournaments in almost any ball game.

Panna is like a compact version of football (soccer), played in a small cage using easy-to-understand rules derived from football. The basic rules are quick to list: Each team has one or two players, and the duration of the match has been reduced to four minutes. The team that scores the most goals – or the one that scores a goal through the opponent's legs – is the winner. One of the niceties of panna is that the compact field is easy to acquire and place anywhere, such as a housing company yard or a park.

Lappset pannas are made of metal, so they can tolerate rough use and changing weather conditions.

Ball games are at the core of communal physical activity. Lappset ArcSport multi-purpose sports arenas lend themselves to almost any ball game. The standard version functions as a football field, but it can easily be adapted for floorball, basketball or volleyball, for example. Goals and stands for various games are naturally included in Lappset's product selection.

The ArcSport multi-purpose sports arenas have been designed to blend into the Finnish landscape. Their wooden structures are suited to any place and they are highly tolerant of weather changes and hard use. In design, we have made no compromises in user-friendliness. The entrances to the field are at the goal ends, so they do not cause any harm on the sides.

080922M BASKET BALL STAND 2

Warranty Terms and Conditions

These warranty terms cover the products and components manufactured by Lappset as specified below.

The warranty starts on the day the product is delivered from the Lappset Group factory. The warranty is valid only on the condition that the foundation, installation and maintenance work have been carried out and documented according to Lappset Group's instructions. A logbook of the handover inspection and documents for maintenance work carried out have to be presented, if necessary.

Warranty times

20 years

- » steel components and structures
- » elements made of high pressure laminate (HPL).

15 years

- » aluminium components
- » fibreglass-reinforced plastic components

10 years

- » preserved wooden parts with no ground contact
- » preserved wooden parts with ground contact (in Europe)
- » concrete parts
- » surface finish of steel and aluminium components

5 years

- » preserved wooden parts with ground contact (outside Europe)
- » unpreserved wooden parts
- » plastic and fibreglass parts
- » steel reinforced nets and ropes
- » springs

3 years

- » rubber and rubber-coated parts, polyurethane parts
- » moving parts, malfunctions
- » steel cables, chains
- » surface finish of other than steel and aluminium components
- » painted or surfaced plywood boards

1 year

- » nets and ropes in sports products
- » textile elements and stickers
- » plaster-coated parts
- » electronic components

The warranty for the surface finish on metal components installed in structures within 500 metres from the seashore is half of the standard warranty time. Products and their components manufactured by a third party, and electronic products and their components are covered by warranty terms provided separately.

Covered by warranty

The warranty covers free delivery of components covered by the warranty to Lappset retailer's storage that is relevant to the case or nearest to the customer. Defective parts must be replaced with Lappset components. If requested, any damaged components must be returned to Lappset Group at the sender's expense. The warranty of any replaced product or part thereof shall remain valid until the end of the warranty period of the original product or part.

In the event of damage or loss during transport, the Incoterms 2010 delivery terms shall apply in export trade, and the Finnterms 2001 terms for the delivery of goods in Finland. The recipient is responsible for checking the delivery against

the packing list or dispatch note prior to accepting the delivery. If there is any external damage to packaging, this should be noted in the bill of lading. If there is any damage in the product sustained during transport that could not be detected on receipt, the forwarder's representative must be asked to inspect the goods within seven (7) days of the receipt of the goods.

Not covered by warranty

- » Normal wear and tear or damage sustained during incorrect storage, installation or use, or resulting from vandalism or natural disaster.
- » Corrosion of metal parts caused by salt water or salt-water fog.
- » Corrosion caused by scratches and dents.
- » Minor natural cracks or bends, splints or tears in wood.
- » Slight fading of colours or other cosmetic faults and defects.
- » Faults resulting from negligence of installation and maintenance instructions, or faults resulting from maintenance.
- » Any modifications or repairs made in the product or parts thereof by other parties than Lappset Group.
- » The installation costs of the parts replaced under the warranty.

Lappset Group's responsibility for faulty products or parts thereof is limited to what is stated in these terms of warranty. Lappset Group shall not be responsible for any indirect costs, losses or damages.

This warranty applies to all orders delivered after 1 January 2016. In warranty issues, please get in touch with your contact person.

Delivery and installation

Delivery

Lappset equipment is delivered as components and elements with:

- » despatch notes
- » installation instructions
- » inspection and maintenance instructions.

Lappset design criteria ensures efficient packaging for ease of transportation. The packages are placed on pallets to speed up the loading and handling, and significantly reduce transport damage and costs.

Installation instructions

With each Lappset product we attach clear assembly and installation instructions. Components are clearly numbered in order to make the installation as easy as possible. In the illustrated installation instructions you will find all the necessary information.

Minimum safety zones

The safety area for each product is shown in the catalogue and also in the installation instructions. Since products may change during the validity of this catalogue, the safety area must always be built according to the installation instructions provided with the product. Up-to-date documents can also be found on the Lappset website.

Foundation

As standard, the equipment is installed on underground foundations. Alternatively, the equipment can be surface mounted. Please specify when placing your order if you wish to opt for surface mounting.

Installation

Installation instructions are sent with all products and must be followed. The equipment must be assembled and installed on site following the installation instructions given by the manufacturer.

Ordering instructions

Orders can be made by letter, fax, e-mail or phone. If modifications are required to standard products, please advise in writing.

Information on deliveries

If you have placed an order and need information on the delivery or if you have a problem with the delivery, please contact your local distributor.

Terms of delivery

Prices include goods-in-transit insurance and freight costs. The products are delivered to the client's property; the client is responsible for unloading the lorry. Please make sure that you have the necessary unloading equipment ready to avoid delays. Orders for standard products can be cancelled without any extra cost within

8 days of placing the order. Cancellations of orders for customised MyDesign Q products are subject to a charge of 70% of the product's price. The delivery time can be postponed once (by a maximum of one month), but no later than one (1) week before the date on which the delivery vehicle is due to leave the factory.

A small delivery surcharge is levied on deliveries of small batches.

Delivery time

We deliver within 2-8 weeks from receiving your order, depending on the season and the products. Please order standard products well in advance - no later than 4 weeks before you need them - to ensure that we can provide you with the product at a reasonable price even in high season. We normally reserve around 8 weeks for delivering products that have only been introduced in the most recent catalogue.

Product modifications

We develop our products constantly in line with international standards concerning both safety and quality. Therefore we reserve the right to modify our products and prices.

Patents and design protection

Lappset holds valid patent and design protection for its products. All rights are reserved.

Keep in mind that Lappset Play and Park products can be easily combined with the Sport range of products! Please also get acquainted with our Play and Park catalogues.

Feedback

Feedback is important to us, as it helps us to develop and improve customer satisfaction.

Please return any faulty parts or describe the fault in detail to enable us to send you a replacement quickly and to eliminate the fault from future products. Send us feedback on our products and services! Giving feedback is easy: just visit our website at **www.lappset.com**.

With regard to complaints, please contact a member of our sales team.

We invite mankind outdoors
